

## Complete solar solutions, straight from Solar in America

Building on expertise gained over decades, our Manufacturers lead the solar industry in developing clean, reliable solar power solutions that consistently exceed the expectations of customers and partners.

With a long history of successful solar power development projects and satisfied customers worldwide, the Solar in America Projects & Solutions team is ideally equipped to turn your clean energy vision into a reality.

From small-scale solar projects that power a single building to large-scale solutions that deliver energy to a community, we have the experience and background to develop durable, proven solutions that operate dependably—even in harsh and demanding environments.

Invest in your organization's future and become part of the renewable energy movement that is transforming the world. Join us in helping build businesses and communities powered sustainably by clean energy from the sun.

### Power your project with the Power of Solar in America

As a team of highly skilled and dedicated solar professionals, we are committed to delivering efficient, effective solar solutions to a wide spectrum of organizations. We have a proven track record of working with corporations, non-profit organizations, government agencies and utilities—providing expert guidance toward the right solution for each specific solar need.

Solar in America provides solar solutions to utilities, municipalities, industrial companies and other organizations—from small-to-midsized businesses to global enterprises. We have delivered a tremendous variety of solutions all over the globe, including ground mount, rooftop, carport, tracking and integrated storage solutions.

Despite the fact we have one of the strongest solar resumes in the world, we continue to explore innovations and advances to enhance solar technologies and to solve tomorrow's complex energy challenges.

### Comprehensive solutions

Take advantage of our long and proven track record. Our capabilities meet or exceed those of nearly any other solar developer, ensuring that your experience over the course of an engagement will be straightforward, simple and problem-free.
